Dear valued customer,

In 2019, Denk will be celebrating its 55th birthday. My wife Jutta and I have been running our family firm, founded in Coburg by my father, Franz Denk, for ten years.

In this catalogue, we would like to show you our successful products and innovations. You can find the entire range, lots more information about our products, as well as photos from our workshops online at www.denk-keramik.de.

We have expanded our range of romantic lighting for home and garden with *Lipilux*. This light is fuelled by natural vegetable oil.

The new *Planter* is not just any ordinary planter. It has openings for climbing supports, ideal for roses, tomatoes and other bush-like plants.

Wild bees are essential for pollination, but their numbers are sadly in decline. Our new, species-appropriate and stylish *Wild Bee House* helps these useful insects to settle in your garden. Our *Bumble-Bee Castle* and *Bird Table* are now available in *Granicium*®.

My wife Jutta and I, as well as our staff, would be delighted if you chose one of our handmade, durable, unique pieces.

Fabian Denk *Jutta Denk*

Best wishes from Coburg,
Fabian and Jutta Denk

WAXBURNERS

Waxburners are only available from Denk. We invented them and we have had them protected. Each Waxburner can be safely operated with wax. Waxburners have a flame-retardant, longlasting, fibreglass wick. Simply use candles and leftover wax as fuel. It's a cost-effective and resource-saving fuel.

New light from old wax. Each Waxburner is supplied full of wax.

- 1 Burner made from conductive aircraft aluminium
- 2 Long-lasting wick made from fibreglass filaments
- 3 Thermo metal winding
- 4 Heat-resistant special ceramic
- 5 Melting area defined depending on volume

LIPI LUX®

Natural light from vegetable oil

Lipilux is a vegetable oil-powered light for indoor and outdoor use. Vegetable oil is a sustainable, carbon-neutral and inexpensive fuel. *Lipilux* is made in our workshops from natural green porcelain. It has an aluminium burner and a long-lasting wick made of fibreglass. We have applied for a patent for *Lipilux*.

Lipilux burns with a peaceful, yet strong flame, cleanly, safely and odourlessly. *Lipilux* can also be used as an aroma light, in conjunction with our pure and natural aromatic oils. It also includes a decorative snuffer made of hand-blown, heat-resistant glass.

Lipilux
Ø 10.8cm | H 9cm | vol. 260 ml | 450g

Lipilux wind cover
Ø 8cm | H 6.5cm | 90g

FEURIO

The Big Brazier

Our largest brazier, *Feurio*, is the ultimate brazier for real fire fans, large families or anybody who loves elegant design and optimum heat retention.

There are seven solid *CeraFlam*® ceramic elements in the stable, non-rusting stainless steel frame. Heat is stored in the ceramic elements over time. To fry or BBQ, simply put on the separately available grill or matching frying pan. *Feurio* is a dream for anyone who loves fire.

CeraFlam® stores around 3x more heat than steel.

Feurio
Ø 65cm | H 32cm | 33kg

COMFY BRAZIER

Fire, light & plenty of warmth

The *Comfy Brazier* is a brazier and heater in one. The four solid *CeraFlam*[®] elements have been individually positioned in the rust-proof stainless steel frame. They are able to absorb and store a lot of heat – approximately 3 × more than steel. This reduces fuel consumption with the same thermal storage capacity.

The *Comfy Brazier* radiates heat for a long time, even after the flame has been extinguished. Thanks to its funnel shape, heat radiates in a large radius.

The ceramic inner bowl is easy to remove for cleaning, using the poker supplied. The ash then falls out at the bottom and can be collected, e.g. in a pail.

Comfy Brazier
Ø 55cm | H 46cm | 27,5kg

FEUERFREUND

Simple, powerful and ingenious

The *Feuerfreund* is a brazier and heater in one. It is a safe and atmospheric way to enjoy fire, light and warmth in your garden, on the terrace or balcony.

The *Feuerfreund* is robust and hard-wearing, mobile and easy to transport. The solid ceramic bowl is supported by the rust-proof, stainless steel stand. The *CeraFlam*® bowl is able to absorb and store a lot of heat – approximately 3 x more than steel. It requires less fuel for the same thermal storage capacity.

The *Feuerfreund* radiates heat for a long time, even after the flame has been extinguished. We also supply a grill for BBQs and frying.

Feuerfreund
Ø 49 cm | H 40cm | 14kg

Brazier
Ø 34cm | H 18cm | 6kg

BRAZIER

The Classic

Our classic, one-piece brazier made from CeraFlam® is easy to transport and creates a safe, authentic, fire experience wherever you desire – in the garden, on the patio, balcony or beach. We can supply a matching stand.

CeraFlam® stores around 3× more heat than steel.

MINI-BRAZIER

For the next generation

With the CeraFlam® *Mini-Brazier*, children aged 5 and over can learn how to deal safely with fire, under adult supervision. Not only is this educationally valuable, it is also a lot of fun.

Using twigs and small branches as fuel, the fire in the *Mini-Brazier* is always easy to control. If required, we can also supply a matching pan with holders. Let's get sizzling!

CeraFlam® stores around 3x more heat than steel.

Mini Brazier
Ø 24cm | H 13cm | 2.1kg

FIRELIGHTER

Light fires with vegetable oil or leftover candles

You can safely and cleanly stack large pieces of firewood with the *CeraFlam® Firelighter*. The large, curved fire groove allows the initial flame to come into contact with the entire width of the wood. This immediately creates a high temperature and a flue draught. Particulates and odour are reduced.

The wood catches fire very quickly. While the fire is lit, the *Firelighter* remains in the embers where it also stores thermal energy, increasing the energy efficiency of the fireplace. Once it has cooled down, the *Firelighter* can be removed and reused. No cleaning is necessary.

You can use vegetable oil and leftover candles as fuel in the *Firelighter*. These energy sources are cheap, ecological and found in every household. You will love how safe and easy lighting your fire can be.

BREAD & CAKE

The patented baking dish

The *Bread&Cake* Baking Dish transforms amateur bakers into artists who will astonish everyone, not least with our lovingly tried and tasted recipes.

Bread&Cake is made from heat-retaining *CeraFlam*® ceramic. Like a real, wood-fired oven, it encourages formation of an even crust, even on the underside of the bread, without burning. You will love how easy it is to make bread and cakes.

Bread&Cake is designed for recipes using up to 750 g flour and comes with a detailed recipe book.

Bread&Cake
Ø 30cm | H 4cm | 2 kg

BREAD & CAKE XL

The patented baking dish

Make recipes using up to 1,500g flour with our CeraFlam® XL baking dish. The finished bread weighs up to 3,500g, which is easily enough to fill up even a large family. But Bread&Cake XL can do even more than just bake wonderful bread.

The baking dish is equally good for pizza and cake, where results can be compared with a professional, wood-fired oven. Don't worry though, it's all still simple and uncomplicated.

Bread & Cake XL
L 38cm | W 28cm | H 5cm | 3.1kg

ROLL BAKER

The patented baking dish

Wake up your family to the delicious aroma of homebaked Sunday rolls. It's really easy, even in your pyjamas or dressing gown. With our patented baking dish, you can bake delicious, crusty Sunday rolls even without years of experience.

How about sweet-smelling currant buns, crusty Sunday rolls, fine poppy-seed rolls or hearty ham rolls? You can prepare all of this and much more with the CeraFlam® Roll Baker.

Roll Baker
Ø 37cm | H 4.5cm | 4.5kg

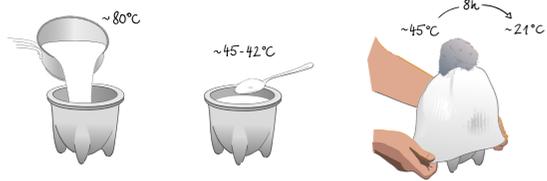

YOGHURT MAKER

Fresh Yoghurt in an Instant

Make your own, fresh yoghurt in an instant with the *Yoghurt Maker*. All you need is warm milk and three dessert spoons of yoghurt as a starting culture.

The high heat-retention capacity and simultaneous low heat conductivity of our granite ceramic is crucial to the function of the *Yoghurt Maker*. *Granicium*® retains heat around 20× longer than steel.

Also suitable for lactose-free milk and soy milk.

Yoghurt Maker
H 14.5cm | Ø 15cm | 700 ml | 1.35 kg

COSYROAST

The lightning-fast outdoor stove. Put the food on the fire and let everyone take their place around it. It creates such a cosy and sociable atmosphere! The chef is still in charge – not alone at the cooker as usual, but right at the heart of the social gathering.

Preparing delicious food is a shared pleasure. Frying, roasting, braising or BBQ – this feast among friends and family will turn into a culinary occasion that everyone will want to repeat.

The CeraFlam® CosyRoast is very easy to use. Use our Quick Briquettes, charcoal or wood as fuel. The Quick Briquette supplied ignites quickly and a light draught will encourage the fire to take. Just put on the frying pan and enjoy cooking among friends.

CosyRoast
Ø 35cm | H 16cm | 6.5kg

CELTIC CAULDRON

Fireproof cookware

The *Celtic Cauldron*, made from glazed *CeraFlam*®, is made for cooking and frying on an open fire. It can be used on charcoal or gas BBQs, braziers or on the *Denk CosyRoast*, as well as in the oven. The *Celtic Cauldron* likes it hot and fiery.

The idea behind our cookware is that it can go »from the fire straight to the table«. The *Celtic Cauldron* looks good on the table, but it's more than just a pretty face.

Use the *Celtic Cauldron* griddle to grill fish, shrimp or small pieces of meat. You can also use it as a lid or stand.

Celtic Cauldron with griddle / lid
H 11.7cm | Ø 30.5cm | together 4.1kg

STORAGE BOWL

Storing fruit and vegetables the natural way

The *Storage Bowl*, made of breathable *CeraNatur*[®], is designed for natural storage of fruit and vegetables. The *Storage Bowl* protects its contents against light, and ensures good air circulation so that no condensation forms. The ceramic neither absorbs nor gives off odours.

The connectable beech wood dividers enable to the bowl to be divided up into separate sections. Beech is very hard, which makes it ideal for use in direct contact with foods, so you can store carrots right next to onions or potatoes. We also include a cover made of high-quality Upper Lusatian linen, with sewn-in elastics. This linen rapidly absorbs and releases moisture.

Storage Bowl
Ø 39.5 cm | H 16 cm | vol. approx. 12.5 L | 6.0 kg

💡 Storage info

Tomatoes and apples give off the gas ethylene that accelerates the ripening process.

For that reason, they shouldn't be stored together with other varieties of fruit and vegetables.

ROCK CELLAR

Ripen cheese in the perfect microclimate

The *Rock Cellar* is made from *Granicium*®.

A balanced, even climate builds up inside it, which makes it ideal for storing and ripening cheese. The *Rock Cellar* achieves what cheese connoisseurs want. *Granicium*® is a purely natural product that is food-safe and dishwasher-safe.

The *Rock Cellar* is the ideal place to rest, store and ripen hard and soft cheese. Just put the cheese under the cover and then store the *Rock Cellar* in your kitchen or pantry without cooling it.

The cheese will then be deliciously ripe when you enjoy it.

Rock Cellar
Ø 23cm | H 15cm | 3.9kg

MORTARS

Enjoy the full aroma

Herbs and spices freshly crushed in a mortar are particularly aromatic and loved by cooks and foodies. Unlike grinding, crushing herbs and spices in a mortar squeezes the essential oils out of the flavour components. We like crushed spices better than ground ones.

Our mortars and pestles are made from *Granicium*[®] – the crystalline surface is comfortable and non-slip, making it ideal for grinding. The material is also food-safe, extremely robust and dishwasher-safe.

Hand Mortar Set
L 31 cm | W 9 cm | H 11.5 cm | 1.1 kg

Rocker Mortar
Ø 14 cm | 1.4 kg

WATER

3QUELLEN

GLASS PITCHER

PULSATOR

3QUELLEN®

Water activation

We put our first 3Quellen water activation system into operation for preparing our own clay in 1998. Since then, 3Quellen water has been making many of our extremely intricate and complicated ceramic pieces easier to produce. In fact, some of them are only possible with this water.

Since 2008 we have been selling our systems for integration into your domestic water supply. 3Quellen systems are in use all over Europe. The 3Quellen principle is patented.

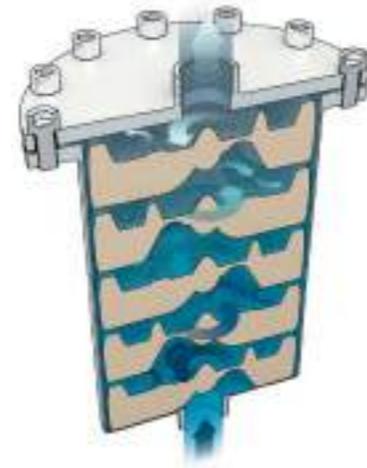

Test the effects of our 3Quellen system for yourself, at no risk. If you are dissatisfied with any of our water-activation products, you can return them within 6 months for a full refund.

The 3Quellen system is simply integrated into the mains water system where it keeps on working with no need for maintenance and without electricity or salts.

L model
Assembled ready for connection to domestic mains water systems, including wall-mounting and attachments.
Connection: 2 x flange with 1 inch internal Thread

L 30.5 cm | Ø 22 cm | 12 kg

- 1** The mains water is compressed, swirled and given dynamism by ceramic »source stones«.
- 2** Our source stones are made of CeraActiv® ceramic with special minerals and crystals.
- 3** EM (effective micro-organisms) are added during manufacture of the CeraActiv® ceramic source stones.

GLASS PITCHER

Our *Glass Pitcher* is made from *EMCrystal*[®], which we developed ourselves, using effective micro-organisms.

The thick-walled glass is not industrially smooth, but has a surface structure that is visible to the naked eye and is also full of small and tiny chambers. The base is reinforced and shaped in an inward wave. It is a high-quality piece of glasswork with a shimmering, slightly turquoise colour that looks great on any table.

Glass Pitcher
Ø approx. 18cm | H 21 cm | 1.1 kg | 2 litres

PULSATOR

The *CeraActiv*[®] ceramic *Pulsator* is an easy way to activate your drinking water. The forward and backward rotation of the *Pulsator* creates a double swirl and transfers kinetic energy into the water.

Pour mains water into a container. Leave the *Pulsator* standing in the water for at least 10 minutes. Rotate the *Pulsator* back and forth for around 20 seconds before drinking.

Pulsator

LIVING

LUXOR

LIGHTHOUSE

PLANTER

ORCHID POT

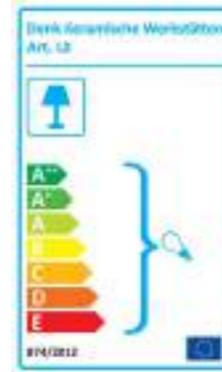

SCENT TREASURE

LUXOR

The multi-functional light with power point

The *Luxor* is a portable garden light with 5m connecting cable and a sturdy and non-dazzling opal glass dome. A high-quality socket for unobtrusive power supply has also been incorporated into the base. It is easy to connect *Luxor* to *Luxor* and flexibly illuminate your house and garden at any time. It means you always have a nearby source of electrical power, e.g. for an electric lawn mower, hedge trimmers or christmas lights.

15-year weather-proof guarantee.

Luxor
Ø 26.5 cm | H 27 cm | 8.2 kg

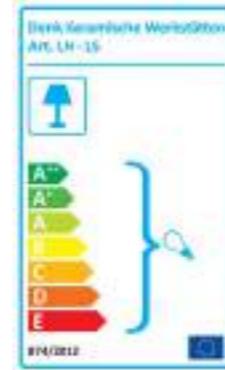

LIGHTHOUSE

The classic

Warm, soft light deserves a home of its own – our *Lighthouse*. The *Lighthouse* is a sturdy, high tower with a secure, square, pointed roof. Four ceramic archways at the top let out plenty of light on all four sides.

The *Lighthouse* is so authentic and original that it belongs in every sophisticated house or garden design. The *Lighthouse* is available in two sizes. A plug socket, motion sensor or switch can be incorporated into the large version.

15-year weather-proof guarantee.

Lighthouse, large
L 30cm | W 30cm | H 80cm | 28kg

Lighthouse, small
L 26.5cm | W 26.5cm | H 46.5cm | 10.5kg

The *Lighthouse* has been around for over 40 years. The idea behind it was that garden lights should be more than just inferior sources of light. Our ceramic already radiates its own warmth and naturalness and, combined with warm light, it makes our unique *Lighthouse*. After all this time, we can rightly call it a classic.

You can see the original *Lighthouse* in the picture at the top. It has now been at our workshops since 1976, shows the way during the day and gives off a non-dazzling, romantic light in the evening.

PLANTER

With openings for climbing supports

The *Planter* made of *CeraNatur*[®], with openings for climbing supports, is suitable for gardens, balconies and terraces. It provides the perfect conditions for growing climbing plants.

The *Planter* is ideal if you want to plant bushy plants such as roses, tomatoes or cucumbers. Simply insert four canes into the integrated openings and leave your plants to climb.

For optimum growth and the best yields, the height of the *Planter* has been chosen to enable layered set-up, as in a raised bed. We show you how easy it is in the description enclosed.

15-year weather-proof guarantee.

Planter
H 40cm | W 22cm | D 22cm | 12kg

Base
H 4cm | W 31cm | D 31cm | 3.5kg

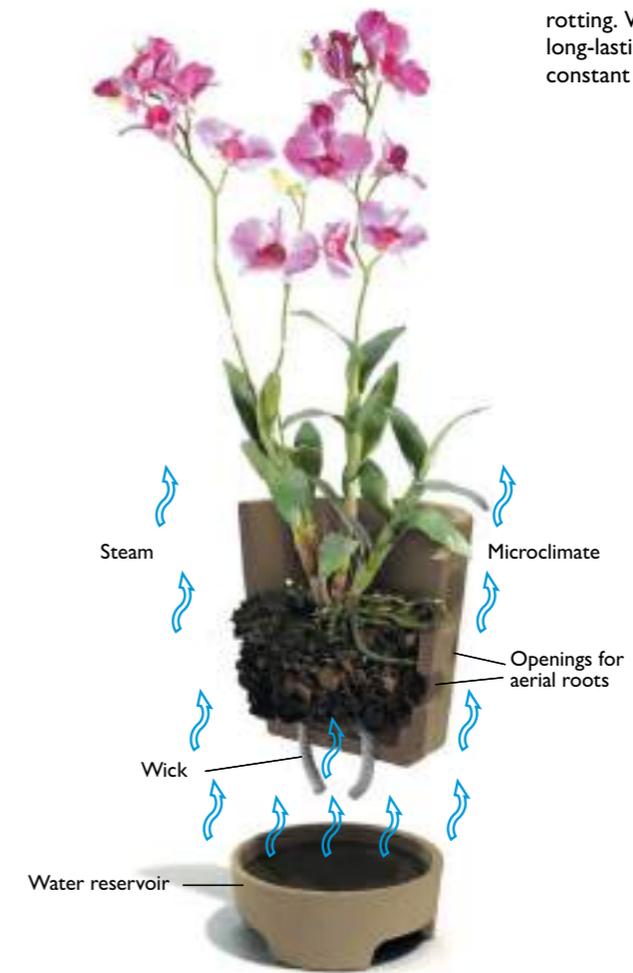

ORCHID POT

In the wild, tropical orchids grow on trees. Their aerial roots require high air-humidity, which makes orchids difficult to grow as houseplants. Our patented *CeraNatur® Orchid Pot* enables you to simulate the conditions in which orchids would naturally live and guarantee the perfect environment for growth.

Our patented *orchid pot* consists of a pot and a water reservoir to prevent build-up of damp and rotting. We have incorporated a water-absorbent, long-lasting wick into the base of the pot for constant moisture supply.

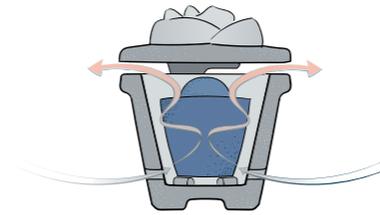

Orchid Pot
 Ø 16 cm | H 18 cm | 2.1 kg

SCENT TREASURE

**Experience fragrance in
a whole new way!**

The patented *Granicium® Scent Treasure* is a three-stage adjustable diffuser for all kinds of liquid fragrances. Its washable fragrance reservoir absorbs oils, essences or perfumes and diffuses them into the air over a long period.

You can put the *Scent Treasure* anywhere in your home. As well as aromatic oils, you can also use perfumes or room fragrances in the *Scent Treasure*. We supply a range of high-quality, pure and natural essential oils (see p. 22).

BIRD BATH

Granicium®

An attraction that will bring a variety of birds to your garden. Your feathered friends can enjoy a refreshing bath, or quench their thirst from the edge, as well as from the central island. The material is rough enough to offer secure footing for every bird.

A suitable site for the bath can be found in any garden – on lawns, gravel, walls or terraces. Your visitors will appreciate the cool liquid, which should ideally be topped up every day. The *Bird Bath* can even be used in winter when birds desperately need water. As it is frost-proof, it will not be affected by ice.

The *Bird Bath* can be raised off the ground using the optionally available stainless steel stand. This keeps birds safe from cats and makes them even easier to observe. The *Bird Bath* is made from Granicium®. It is unglazed and natural, totally frost-resistant and weatherproof.

15-year weather-proof guarantee.

Bird Bath
Ø 38cm | H 6.5cm | 5kg

Bird Bath with stainless steel stand
Ø 38cm | H with stand 55 cm | 7kg

BIRD TABLE

Granicium® / CeraNatur®

The patented *Bird Table* is a species-appropriate bird feeder that birds can fly into from all sides. Its transparent structure makes the *Bird Table* ideal for birdwatching – a fascinating way to pass the time. At the same time, the open structure makes birds feel safe.

The frame has an option for hanging up fat balls, as well as scattering feed, so you can satisfy the dietary requirements of most song birds. The *Bird Table* has a three-part structure made from ceramic and a rust-proof, stainless steel frame. The pieces are easy to put together. They are so secure that the *Bird Table* can even withstand storms.

A rust-proof, stainless steel stand is available to go with the *Bird Table*. The stand keeps birds safe from cats and makes them even easier to observe. The stand is the same for our *Bird Bath*.

15-year weather-proof guarantee.

Bird Table with stainless steel stand
Ø 37cm | H 64cm | 6.7kg

Bird Table with stainless steel mounting
Ø 37cm | H 110cm | 5.2kg

💡 Bird-feeding info

If you use suitable food, you can feed and observe birds all year round. However, you should cut right down on feeding in the summer so as not to influence natural behaviour.

NESTING BOXES & FEEDING ROOF

CeraNatur®

The *Nesting Box* blends seamlessly into the natural surroundings, so it is readily accepted by nesting birds. The bark-effect front panel is securely screwed onto the body, providing optimum protection against all nest predators. The ceramic is very hard and durable, so it can even withstand attacks by woodpeckers.

CeraNatur® ceramic is temperature regulating. It stores up heat during the day and radiates it over night. It is not susceptible to mould and will not be affected by bird droppings.

15-year weather-proof guarantee.

Ø 14.5cm | H 20cm (with chain) | 0.3kg

WILD BEE HOUSE

CeraNatur®

The *Wild Bee House* is made of durable *CeraNatur®* ceramic and has more than 63 woodpecker-proof nesting tubes of different diameters, for the most common solitary insects. It can be mounted on trees, buildings and pergolas etc. The mounting site should be sunny and stable. No protection against the rain is required.

The *Wild Bee House* has a recess on the back for secure mounting. You can position several *Wild Bee Houses* next to each other to create a decorative effect. Please make sure that the insects have a clear approach and that the *Wild Bee House* is not covered by close-by hanging leaves.

15-year weather-proof guarantee.

Wild Bee House
L 18cm | W 11.5cm | D 6.5cm | 1.8kg

Bee info

Wild bees are essential for pollination. Unfortunately, their numbers have sharply declined in recent years, so species-appropriate nesting aids are extremely important.

BUMBLE-BEE CASTLE

Granicium® / CeraNatur®

The *Bumble-bee Castle* has been made with bumble-bees' needs in mind. Its two-piece structure with insulating bottom panel is made entirely from ceramic and is frost-proof and stable. The entrance is painted blue to encourage bumble-bees to come inside. Bumble-bees start to hibernate in the *Bumble-bee Castle* in the autumn and build their nests in it in spring.

The *Bumble-bee Castle* helps bumble-bees to become established in the garden and it is also a very attractive decoration.

15-year weather-proof guarantee.

Bumblebee info

Bumble-bees are hardworking garden helpers. Unlike honeybees, they also fly on cool and wet days, so they make sure that plants and flowers are pollinated.

HEDGEHOG HOUSES

CeraNatur®

The CeraNatur® hedgehog houses are frost-proof and provide protection all year round. Hedgehogs are not only cute, but an important pest-control expert. Hedgehogs will remain in the same territory if conditions are right. They prefer a dry, safe home that cannot be sniffed out by dogs.

Dig the hedgehog houses down into the earth a little, make a bed of leaves inside and cover it with grass, bark and leaves. The hedgehog houses protect hedgehogs in hot summers and cold winters.

15-year weather-proof guarantee.

Igelwissen

Der Igel steht ganzjährig unter Naturschutz. Er ist nachtaktiv und ernährt sich von Insekten, Larven und Nacktschnecken. Während der Winterschlafzeit kann der Igel bis zu einem halben Jahr ohne Futter auskommen.

MINKA'S TILED STOVE

The electric heated cat bed

Minka was the name of our workshop cat. Because she always liked to make herself comfortable on the radiator, we made her her own little tiled stove. Cat lovers and breeders have been using *Minka's Tiled Stove* for a few years now. Our customers are delighted with the positive effect on their pets.

Minka's Tiled Stove is made from *CeraNatur*[®] ceramic and heated electrically. The self-regulating heating element has an economic output of 10 watts and heats up the *Tiled Stove* to a constant 48°C. Electricity costs amount to around 5 Euro cents / 24 hours. *Minka's Tiled Stove* is TÜV tested. It also comes with a straw-filled cushion.

CERAMICS

We develop our own ceramics. When creating our ceramics, it is important to us that we bring to life the fascinating variety of functions and colours of the natural material.

We often work at the limits of technical possibility. We can do that because we have more than 50 years of experience in manufacturing, moulding and firing ceramics. All of our materials are made from natural ingredients – clay and stone.

CeraNatur[®]

CeraLava[®]

Granicium[®]

CeraFlam[®]

CeraNatur®

Regional clay

Sandstone-coloured clay forms the basis for our natural ceramics. This clay is a geological anomaly that is only found in Coburg, in a thin layer of earth.

We fire CeraNatur® at a high temperature to make it robust and frost-proof. Its naturally shimmering brown tones and velvety-soft surface never fail to delight us.

Manufacture

This unique clay is quarried in a nearby clay pit and refined according to our specifications. It is then treated in our mill with activated 3Quellen® water. After at least two weeks of storage, the material can finally be kneaded and worked.

CeraNatur® allows us to make thick-walled, solid ceramics, which are the prerequisite for durability and lasting quality. After drying, which sometimes takes several weeks, CeraNatur® is fired at a high temperature in an open gas burner. This gives it its characteristic colouring. It cannot be influenced by human hand, so each piece is unique.

Material properties

CeraNatur® is a wonderful material, with many different uses in the home and garden. In addition to its outstanding material properties, it has a wonderfully natural appearance that is unique among ceramics.

THE NATURAL

CeraLava®

Lava sand

Lava sand combined with special clays from the Westerwald creates an almost black ceramic. It is a rarity and that is exactly why we like it so much. CeraLava® is as robust as it is frost-proof.

Despite its monochrome surface, this special ceramic exudes warmth and depth.

Manufacture

If you have ever seen rough lava fields, you will be astonished by how soft and fine CeraLava® clay is. The volcanic fire of this material can only be tamed with lots of love, dedication and skill. We grind and knead the clay mix several times.

In an additional step, the mass is then homogenised and smoothed under a vacuum. Only now is CeraLava® ready to work with. It can now be used to make pieces with a very special appearance and power. CeraLava® will always be a diva who needs soft hands and careful treatment.

Material properties

With its quiet power, CeraLava® is a wonderful backdrop for light and fire. It gives our Waxburners and Luxor lights even more expression, without any of the restrictions posed by material properties.

THE VOLCANIC

Granicium®

Natural granite

Granite is a particularly hard, mineral rock with a high quartz and feldspar content. Granite was formed from hardened magma over two kilometres deep, more than ten million years ago.

Granite is characterised by its crystalline structure, high density and immense robustness and we wanted these qualities for our ceramics.

Manufacture

How can it be possible to make ceramic from rock? We get our granite from quarries in the low mountains of Germany.

We obtain a malleable clay by mixing rock flour with activated 3Quellen® water and enriching it with effective micro-organisms and lactic acid cultures.

After extensive further processing, the granite ceramic can then be fired at very high temperatures to make high-quality, durable products.

Material properties

Granicium® is characterised by the properties of its raw material, granite. The high quartz and feldspar content makes the material especially robust and durable. The fine, crystalline composition makes various uses possible and creates a pleasantly non-slip surface.

THE ROBUST

CeraFlam®

Space ceramic

We use *CeraFlam*® in products that need heatretaining and fireproof qualities. A similar composition to the material we have developed was used in American space shuttles for heat insulation. This type of ceramic is very rare and difficult to work with.

Manufacture

How do you make a hi-tech development into workable ceramic? Franz Denk asked this very question 30 years ago.

It took a long time for make our fireproof ceramic from lots of material components. It is a natural ceramic whose material composition is derived from space research. The recipe is a trade secret that we keep under lock and key. It is protected by law as *CeraFlam*®.

Ceramicists need to use all of their skill to make it into ceramic products. It is tough, demanding and stubborn, but well worth the effort.

Materialeigenschaften

There is probably no other ceramic material with such exceptional qualities. Unlike normal ceramic, *CeraFlam*® is totally fireproof and can absorb and store three times more heat than steel. It is not susceptible to aging.
